Brainstorm & Idea Prioritization Template

Date	3 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement

Network-related service requests are often handled through manual communication and ticket routing, which can cause delays, incorrect assignment, limited visibility and missed SLA targets. The team needs a centralized ServiceNow solution that automates request intake, approval, assignment, SLA tracking, escalation, notifications and closure.

Goal: Build a standardized and automated end-to-end network request management process in ServiceNow.

Step-2: Brainstorm, Idea Listing and Grouping

List possible solutions first, then group similar ideas into practical solution areas.

Request Intake

Service Catalog form

Required network fields

Request categories

Workflow Automation

Approval workflow

Auto assignment

Auto priority

SLA & Escalation

SLA tracking

Deadline alerts

Automatic escalation

Communication

Email notifications

Status updates

User confirmation

Visibility & Reporting

Network dashboard

SLA reports

Request analytics

Smart Improvements

Duplicate detection

Knowledge suggestions

Auto closure

Solution Concept

Centralized ServiceNow request intake → automated categorization and priority → approval → assignment to the correct network team → SLA monitoring and escalation → notifications → completion and reporting.

Step-3: Idea Prioritization

Prioritize ideas based on Importance to the project and Feasibility of implementation.

	Low Feas.	Medium Feas.	High Feas.
High Importance	SLA tracking Dashboard	Notifications Auto priority	Request form Approval workflow Auto assignment Escalation
Medium Importance	Duplicate Detection	Knowledge Suggestions	Auto closure
Low Importance			
Importance ↑ Feasibility →			

	Low Feas.	Medium Feas.	High Feas.
High Importance	SLA tracking Dashboard	Notifications Auto priority	Request form Approval workflow Auto assignment Escalation
Medium Importance	Duplicate Detection	Knowledge Suggestions	Auto closure
Low Importance			

Importance ↑ | Feasibility →

Final Prioritized Ideas

Rank	Idea	Priority	Reason
1	Automated Request Creation	Very High	Core entry point for all network requests.
2	Approval Workflow	Very High	Controls authorization before network work begins.
3	Automatic Assignment	Very High	Routes requests to the correct network support group.
4	SLA Tracking & Escalation	Very High	Prevents delays and supports service-level compliance.
5	Notifications & Status Updates	High	Keeps users and support teams informed.
6	Dashboard & Reports	High	Provides management visibility and performance tracking.
Selected Concept: An end-to-end Automated Network Request Management workflow in ServiceNow covering request submission, approval, assignment, SLA monitoring, escalation, communication and closure.			

Ideation Phase

Define the Problem Statements

Date	3 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Reference: <https://miro.com/templates/customer-problem-statement/>

Example:

I am	I'm trying to	But	Because	Which makes me feel
a traveler	book flights on my phone	it takes a long time	The website is not responsive and doesn't have a mobile version	Frustrated

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Employee / Network Requester	submit a network request such as VPN, firewall, IP, DNS or access through one centralized system	I may need to use manual communication, provide incomplete details, and wait for	network requests are not consistently routed, approved and tracked through an automated workflow	delayed and uncertain about the status of my network request.

			approvals or updates		
PS-2	Network Administrator / Support Team	receive, prioritize and resolve network requests efficiently within the required SLA	requests can be assigned incorrectly, approvals may be delayed, and SLA follow-up can require manual tracking	there is limited automation for assignment, escalation, notifications and centralized request visibility	it is difficult to manage requests efficiently and maintain timely service.

Problem Focus: Automate the complete network request lifecycle in ServiceNow—from submission and approval to assignment, SLA tracking, escalation, notification and closure.

Ideation Phase

Empathize & Discover

Date	3 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the users, their goals, challenges and expectations while using the network request process.

For this project, the primary user perspective is the employee or network requester who submits network-related requests through ServiceNow and expects a fast, transparent and reliable process.

Project Empathy Map:

Ideation Phase

Empathize & Discover

Date	3 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Reference: <https://www.mural.co/templates/empathy-map-canvas>

Example: Automated Network Request Management in ServiceNow

The following summary converts the empathy-map observations into practical user needs for the project.

THINK & FEEL

- I want my network request processed quickly.
- I need to know whether my request is approved.
- I want clear status updates.
- I expect reliable and secure network access.

HEAR

- Updates from the IT/network team.
- Manager approval requirements.
- Network policies and guidelines.
- Feedback from colleagues about request delays.

SEE

- ServiceNow request forms and portal.
- Network downtime notices.
- Request status and SLA information.
- Other users' requests and updates.

SAY & DO

- Submit a network request through Service Catalog.
- Provide required details such as access type or VPN need.
- Follow up when the request is delayed.
- Use network services after approval.

PAIN

- Approval and processing delays.
- Limited visibility of request status.
- Manual communication and follow-ups.
- Unclear requirements or assignment.

GAIN

- Faster request processing.
- Real-time status visibility.
- Simple and user-friendly submission.
- Better communication and reliable network access.

Key Empathy Insight: Users mainly need a simple request process, quick approvals, transparent status tracking and timely communication. These needs directly support the project’s goal of automating network request management in ServiceNow.
